CN 318 Assignment
_____

Student in group of 2 must choose 1 from the followings.

1. Programing

Create program to operate as one security system (e.g. firewall, intrusion detection system) where report and presentation must show how the security

system is operated. Also, report must evaluate when there is an attack and show how does it response.
The work must be your own work.

2. Report

Student must select 1 security protocol which does not include the course syllabus. Report must include the description of the protocol in detail as

well as analyze the protocol against the existing protocol. Also, report must suggest pro&cons for selecting which protocol for each situation.

In both programming & report, student must present twice during the semester. 1st presentation is before the Mid-term exam where student must show the

plan, design, progress and basic troubleshooting. 2nd presentation is before the final exam where student must present the finished work with

work&report.

Note: If any part of the work is not your own work and has not been referenced. The whole mark for this assignment will be deducted to 0 (zero) and

possible to take the further actions.
